NANO-CLEAR® INDUSTRIAL WITH MATTE (NCIM) COATING FOR CONCRETE PRESERVATION

**Tom Smith
Memphis, Michigan**

Personal Use Customer:

Tom Smith
Memphis, Michigan

Project:

Preservation and sealing of newly laid concrete approach using Nano-Clear® Industrial with Matte Additive (NCIM).

Project Location:

Memphis, Michigan

Applicator:

Tom Smith
Memphis, Michigan

Coating Formulation:

Nano-Clear® Industrial with Matte Additive (NCIM) coating

Application System:

Hand application by roller and brush

Date:

Application: August 2018
90°F sunny, hot and humid

Before

After

Before and After Concrete Preservation Using NCIM

PROJECT OVERVIEW:

Pictured is new concrete fully cured for over 2 months which the customer wanted to protect from weathering and other environmental degradation. He also wanted a non-skid surface for safety reasons. During the Nano Clear® NCIM application, the customer wanted to change from a full matte finish to a semi-gloss finish with non-skid. The coating was adjusted and applied, resulting in a very satisfied customer. The protocol for **NCIM** coating was followed for this project.

COATING FORMULATION:

NCI – a crystal clear, aliphatic, moisture cured, one component polyurethane/polyuria hybrid formulation with extreme cross-link density for UV, CHEMICAL AND ABRASION RESISTANCE. With Matte Additive becomes **NCIM**.

NCI is formulated to penetrate and fortify existing paint systems (newly painted or highly oxidized), not replace them. With Matte Additive completely removes gloss.

Applications: Heavy equipment, ships, external structures, fleet equipment, facilities, fences (metal and wood), above ground storage tanks, equipment, bridge rails and signs that have degraded paint/coatings from UV, chemical and abrasion forces.

RESULTS:

The concrete floor was fully protective with a **NCIM** semi-gloss coating that provides it with over 10 years of weathering protection.
