**STAMPED COLORED
CONCRETE RESTORATION**

NANO-CLEAR® INDUSTRIAL COATING FOR STAMPED COLORED CONCRETE RESTORATION

David Snook
Livonia, Michigan

Customer:

David Snook
Livonia, Michigan

Project:

Restoration of UV Degradation on a Home Owner's Stamped Colored Concrete Walkway Using Nano-Clear® Industrial (NCI).

Project Location:

Livonia, Michigan

Applicator:

David Snook
Livonia, Michigan

Coating Formulation:

Nano-Clear® Industrial (NCI)
coating

Application System:

Hand application by pump sprayer

Date:

Application: May 2015
65°F (average) sunny

Before

After

Before and After Restoration of Stamped Colored Concrete Using NCI

PROJECT OVERVIEW:

Customer David Snook wanted to restore the color and appearance of his faded walkway with obvious UV degradation. Customer had been refinishing the stamped colored concrete every year due to the continual weathering of the finish. Customer solvent cleaned the concrete walkway in preparation of NCI application. NCI was directly applied, enhancing the natural beauty and hue of the stamped colored concrete. The protocol for NCI coating was followed for this project.

COATING FORMULATION:

NCI – a crystal clear, aliphatic, moisture cured, one component polyurethane/polyuria hybrid formulation with extreme cross-link density for UV, CHEMICAL AND ABRASION RESISTANCE.

NCI is formulated to penetrate and fortify existing paint systems (newly painted or highly oxidized), not replace them.

Applications: Heavy equipment, ships, external structures, fleet equipment, facilities, fences (metal and wood), above ground storage tanks, equipment, bridge rails and signs that have degraded paint/coatings from UV, chemical and abrasion forces.

RESULTS:

The stamped colored concrete was fully restored with a protective NCI coating that provides it with over 10 years of UV protection.
